E-mail forwarding method using communication network - involves referring table indicating correspondence between virtual address and mailing address in order to retrieve corresponding mailing address for transmitting E-mail

NIPPON TELEGRAPH & TELEPHONE CORP 96.05.27 96JP-131964

T01 (97.12.12) II04L 12/54, G06F 13/00, II04L 12/58

The method involves transmitting an E-mail from a set of terminals (2,3) connected in a communication network (1), based on mailing address. A virtual address is set up corresponding to the mailing address.

A table indicating the correspondence between the virtual address and mailing address, is provided in the communication network. The table is referred to retrieve the corresponding mailing address, based on which the E-mail is transmitted.

ADVANTAGE - Simplifies address management. Improves reliability of reception of E-mail. Simplifies forwarding operation. (12pp Dwg.No.1/10)
